

Obey Your Thirst code style document

Use tabs, not spaces, for indentation

like this, not like the rest of the document.

Camel case

nameVariablesLikeThis

Boolean variable name should describe the condition (eg. hasSprite)

never use (boolVar == true)

Spaces after if and for, e.g. if (condition)

Bracket style - brackets start on a new line

thingNeedingBrackets

{

//internal code

}

Variables should have descriptive names

Method names should be verbs, describing their function

/**

* Comment methods like this. Describe what they do, and which inputs might be changed.

* Side effects should be explicitly described. Assumptions on parameters should be given.

*/

Method comments should be as above.

Avoid excessive in-line comments //this example is probably unnecessary, and should

// be left out.

Spaces around operators, e.g. 4 + 5 instead of 4+5

No space after open paren or immediately preceding close paren.
